Project Design Phase
Problem – Solution Fit

Date	21-10-2026
Team ID	23KD1A0592
Project Name	Indoor Gardening Services Management (IGSM)
Maximum Marks	2 Marks

Solution Fit:

The Indoor Gardening Services Management (IGSM) application built on ServiceNow gives a digital and organized way to handle indoor gardening service requests. Employees can raise a request from the service catalog by choosing the plant type, service type, priority and description, instead of sending emails or telling someone in person.

Once the request is submitted, it is saved in a custom table and the priority is set to Low if it was left blank. Flow Designer then sends the request to the manager for approval, assigns it to the technician group and sends an email to the requester. Response and completion SLAs keep track of how quickly the request is picked up and finished.

Access is controlled with roles and ACLs, so requesters see their own requests, technicians update the ones assigned to them and managers have full control. By bringing all requests into one system, the solution reduces manual follow-ups and delays and gives everyone a clear view of the status.

Problem – Solution Fit Canvas:

1. CUSTOMER SEGMENT [CS]

- Employees (requesters) who need indoor gardening services such as watering, pruning or fertilizing
- Technicians who carry out the work
- Managers who oversee all requests
- System admin who configures the application

6. CUSTOMER CONSTRAINTS [CC]

- Requests are sent by email or told verbally
- No single place to see the status of a request
- No clear owner for a request
- Waiting for replies and following up again and again
- No time limits (SLAs) to push work to completion

5. AVAILABLE SOLUTIONS [AS]

Current alternatives:

- Emails
- Verbal requests or calling the technician

Limitations:

- No request tracking
- No SLA tracking
- No access control on who sees what
- Delays in response and completion

2. JOBS-TO-BE-DONE / PROBLEMS [J&P]

- Raise an indoor gardening request easily
- Know the status of the request
- Get the service done on time
- Technicians should know which requests are assigned to them
- Managers should be able to monitor all requests

3. TRIGGERS

- Plants need care (watering, pruning, fertilizing)
- An earlier request is delayed or forgotten
- Having to follow up again and again

9. PROBLEM ROOT CAUSE [RC]

- Requests are handled through emails or verbal communication
- No centralized system for gardening service requests
- No defined ownership or accountability
- No SLA tracking
- No access control on records

7. BEHAVIOUR [BE]

- Send an email or ask in person when a service is needed
- Follow up again when there is no reply
- Prefer a simple form to fill in
- Expect to see the status of the request without asking anyone

4. BEFORE [TR]

- Frustrated by repeated follow-ups
- Not sure who is handling the request
- Worried the request will be forgotten

4. AFTER [EM]

- Can see the status of the request
- Knows the request is approved and assigned
- Confident the work will be done within the SLA

10. YOUR SOLUTION [SL]

- Request form using Service Catalog and Record Producer
- Default priority and description checks using Business Rule and Client Script
- Manager approval, technician assignment and email using Flow Designer
- Response SLA (4 hours) and Completion SLA (2 days)
- Role based access using ACLs

8. CHANNELS OF BEHAVIOUR [CH]

Online:

- ServiceNow Service Portal (catalog item)
- Email notification

Offline:

- Verbal requests to the technician
- Talking to the manager for follow-ups
