Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	21-10-2026
Team ID	[Enter your Team ID]
Project Name	Indoor Gardening Services Management (IGSM)
Maximum Marks	4 Marks

Technical Architecture:

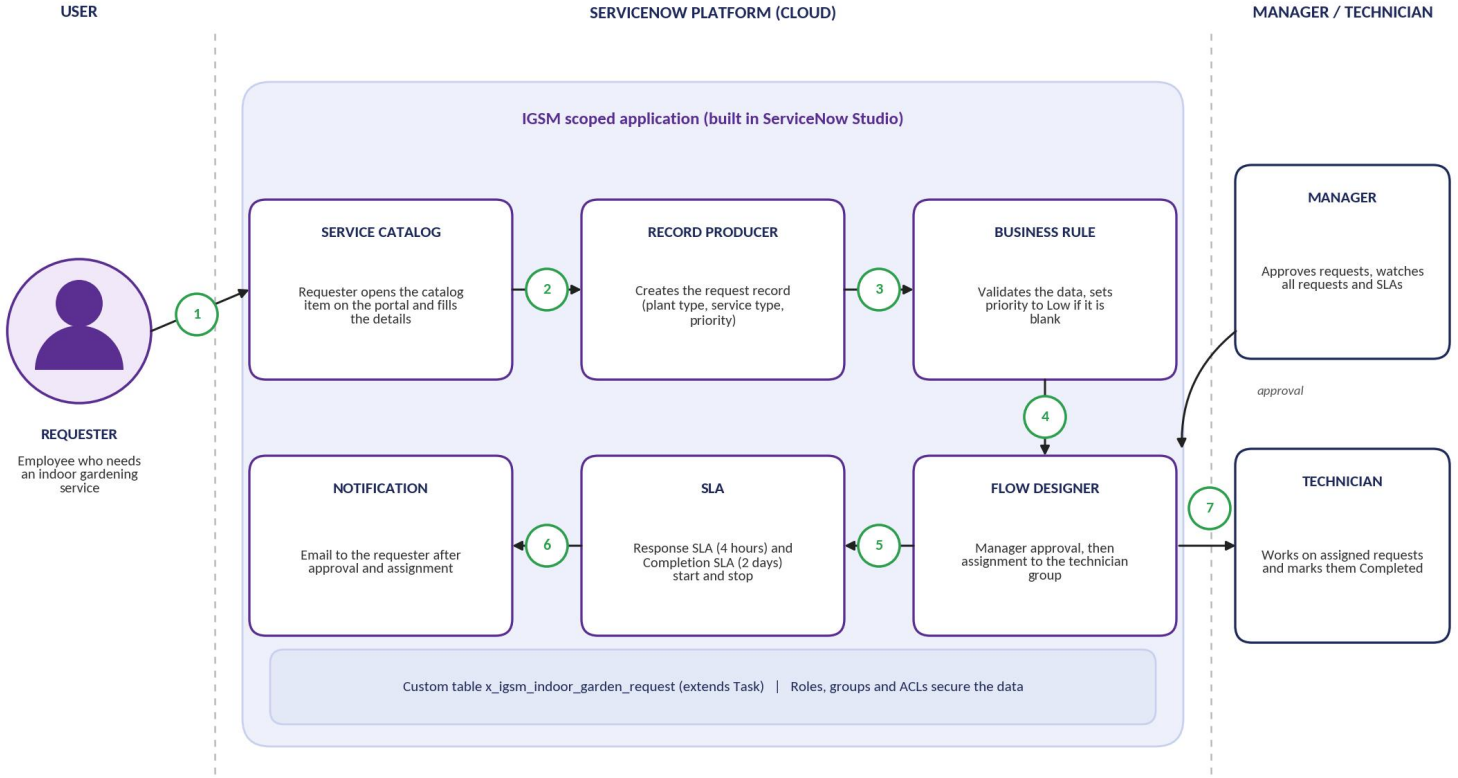

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Requesters raise indoor gardening requests through the portal	ServiceNow Service Catalog, Record Producer, Service Portal
2.	Application Logic-1	Client-side check: description becomes mandatory when priority is High	Catalog Client Script (JavaScript)
3.	Application Logic-2	Backend validation: priority is set to Low if it is left blank	Business Rule
4.	Application Logic-3	Manager approval, assignment to the technician group and notifications	Flow Designer
5.	Service Levels	Response SLA (4 hours) and Completion SLA (2 days) on every request	SLA Definitions (task SLAs)
6.	Security	Role based access for requesters, technicians and managers	Roles, Groups, ACLs
7.	Database	Stores the indoor garden requests, the table extends Task so SLAs can be applied	Custom table x_igsm_indoor_garden_request
8.	Cloud Database	Cloud data storage managed by ServiceNow	ServiceNow Cloud Database
9.	Email Notification	Email to the requester once the request is approved and assigned	Flow Designer notification, ServiceNow email
10.	Development Environment	Scoped application built and tested on a developer instance	ServiceNow Studio, Personal Developer Instance (PDI)
11.	Infrastructure (Server / Cloud)	Application hosting and execution environment	ServiceNow SaaS Cloud Platform

Note: external APIs and machine learning are not used in this project. Integrations with external vendors and advanced scripting are out of scope.

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Low-code Development	Most of the app is built with configuration, scripting is kept minimal	Flow Designer, Record Producer, Business Rule
2.	Client-side Scripting	A small script for form validation on the catalog item	JavaScript (Catalog Client Script)
3.	Security Implementations	Requesters see only their own records, technicians can update, managers have full control	ServiceNow ACLs, User Roles, Groups
4.	Scalable Architecture	Runs on the ServiceNow cloud platform, so no servers have to be set up or managed	ServiceNow SaaS Cloud Platform
5.	Performance	Approval, assignment, and notifications are automated to reduce manual hand-offs.	Flow Designer, Business Rules
