Project Name	Indoor Gardening Services Management (IGSM)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple visual that shows what a user thinks, feels, hears, sees, says and does, along with their pains and gains. It helps the team understand the user better before we start building anything.

For IGSM, the user is the requester, an employee who needs an indoor gardening service like watering, pruning or fertilizing. We made this map to look at the problem from their side, so that the application we build actually solves it.

Think & Feel
I want to raise a request quickly without writing long emails
I get annoyed when I have to keep following up
I want to know who is looking after my request
I worry my request will get forgotten
I want to see the status without asking anyone
I want my plants cared for on time
Hear
Colleagues say mailed requests often get lost
Technicians don't know which requests are pending
Manager can't check delays easily
People suggest a portal instead of emails
News about the new request portal
See
Emails piling up about plant care
Plants drying out in the office
Colleagues asking who to contact
No idea who a request is assigned to
Other services running on portals
Requester
Employee who raises indoor gardening requests
Say & Do
Has anyone looked at my request yet?
Sends emails or asks in person
Follows up again after a few days
Wants to pick service type and priority
Prefers a simple form to fill in
Pain
Requests go through emails or verbal talk
No way to track the status
No clear owner for a request
Delay in response
Delay in completion
Manual follow-ups every time
No SLA tracking
No access control on records
Gain
One portal to raise requests
Simple form with plant, service and priority
Status visible: New, Assigned, Completed
Auto assignment and email notification
SLAs keep work on time
Only the right roles can see or edit
Less follow-up needed
More transparency for everyone
