Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	21-10-2026
Team ID	23KD1A0592
Project Name	Indoor Gardening Services Management (IGSM)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Raise Service Request	Open the Indoor Gardening Request catalog item Select Requested For (user) Select Plant Type and Service Type Choose Priority and Preferred Date Enter Description
FR-2	Request Submission	Submit the request using the Record Producer Create the request record with State = New Generate Request Number automatically Capture Requested Date automatically
FR-3	Request Validation	Set Priority to Low if it is left blank (Business Rule) Make Description mandatory when Priority is High (Client Script)
FR-4	Approval and Assignment	Send the request to the Manager for approval If rejected, update State to Rejected If approved, assign to the Technician group and update State to Assigned
FR-5	Notification	Send an email to the requester after approval and assignment Message: "Your Indoor Gardening request has been approved and assigned."
FR-6	Request Completion	Technician works on the assigned request Technician updates State to Completed

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-7	SLA Management	Response SLA of 4 hours (starts at New, stops at Assigned) Completion SLA of 2 days (starts at Assigned, stops at Completed) Show SLA details on the request record
FR-8	Access Control	Requester can see only their own requests Technician can update assigned requests Manager has full control (read, write, create, delete)

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The request form should be simple and easy to fill in, so that any employee can raise a request without technical knowledge.
NFR-2	Security	Access is controlled using roles, groups and ACLs, so users can only view or change the records they are allowed to. Users log in through the ServiceNow platform.
NFR-3	Reliability	Business Rules should stop invalid state changes, so every request follows the New, Assigned, Completed flow without errors.
NFR-4	Performance	Approval, assignment and notifications should run automatically through Flow Designer, so requests do not wait on manual follow-ups.
NFR-5	Availability	The application runs on the ServiceNow cloud platform, so it should be available to users whenever they need to raise or check a request.
NFR-6	Scalability	The application should keep working as the number of users and requests grows, without any change to the setup.
